## Letter to the Editor

### We do our work with all our heart

These original images were encountered during interventional procedures. Awareness about the abnormalities that they depict is important to identify them. We present an original image of the coronary sinus lead. The lead was placed in the posterolateral branch of the coronary sinus during cardiac resynchronization therapy combined with implantation of an implantable cardioverter-defibrillator. We observed that the lead achieved a heart shape in the left anterior oblique position ([Fig. 1](#)). We would like to dedicate this image to all physicians who are devoted to their work.

**Fig. 1.** The fluoroscopic image showing the heart-shaped coronary sinus lead in the left anterior oblique position.

### Conflict of interests

We confirm that there are no known conflicts of interest associated with this publication.
